

WiseFish

Innovative industry solutions for the entire seafood value chain

WiseFish 6.0 supports complex functions such as production planning and optimisation, primary and value added processing, quality control, inventory management, and integrated costing while offering complete end-to-end product and packaging traceability.

Software for the seafood industry

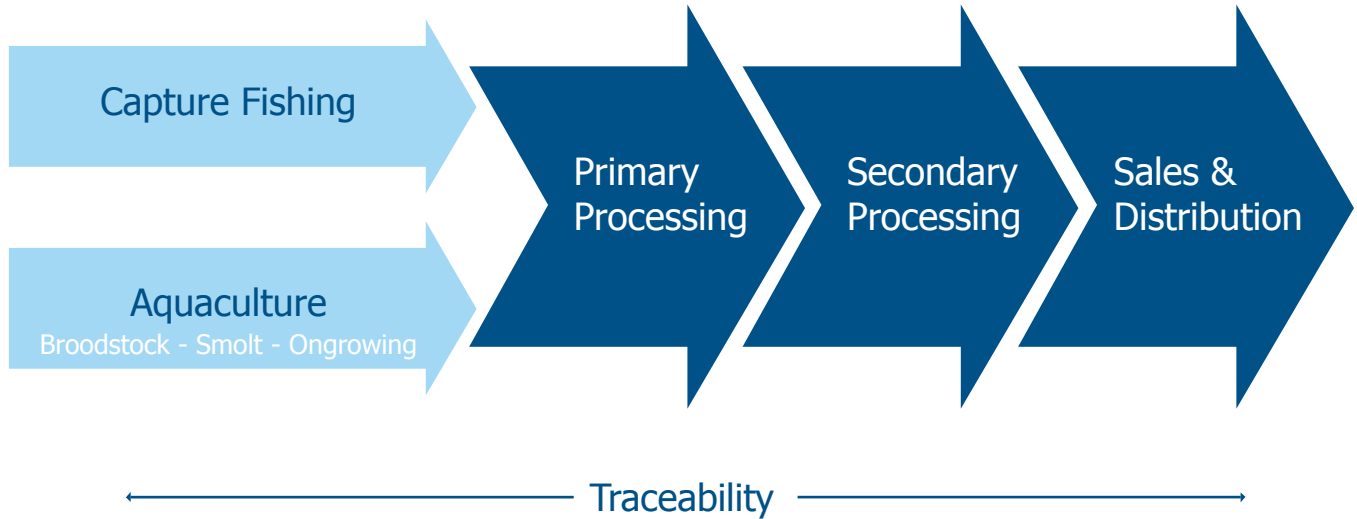

Standard to WiseFish 6.0 are easy drill-downs, EDI (Electronic Data Exchange) and SQL reporting tools, allowing staff to rapidly access information at any time during the purchase, production, sales or transfer process and beyond.

This means that you can track and trace every aspect of your products by expiry dates and production lot, immediate previous source (IPS), immediate subsequent recipients (ISR), stock origin, or ingredient and packaging batches. Log stock data automatically at every stage and monitor mission-critical events (recall or quality holds or write-downs), flag potential supply shortages and streamline processes across the entire enterprise to maximise profit and minimise cost.

WiseFish 6.0 builds upon Microsoft Dynamics NAV, combining the power and reliability of a world class accounting and ERP system with an "out of the box" seafood solution, custom built for your industry. Manage your G/L, accounts receivable/payable and production costing at the point of transaction to ensure reliability and ease of data entry.

WiseFish

The Value Chain

Fishing

Instill customer confidence by capturing complete catch information, including special handling, catch area, and size, all integrated with trip costs. Real-time data functionality lets you know catch details via satellite long before a vessel has landed.

Processing

WiseFish 6.0 seamlessly integrates inventory, quality inspections, lot tracking, catch weight, Electronic Data Interchange (EDI) and expiration date management with detailed costing for full financial and regulatory control of your seafood processing operation. Easily record each activity, from the time the raw material is placed in inventory through each processing stage until it is completed in stock for delivery to the customer. Reduce inventory waste/shrinkage while maintaining strict control of costs with information-driven workflow which supports your business goals.

Aquaculture

Combine biological data captured in AKVA group's premier Fishtalk Control software with the advanced accounting features of WiseFish 6.0 for total COGS of live fish stock inventories right through to harvest and beyond.

Trading

WiseFish 6.0 shines in fast paced seafood sales operations. From one-screen inquiry directly from the sales order for inventory available to promise to automated shipping time calculations built in to the delivery date estimate, these tools are indispensable in meeting the rigorous buyer requirements of today's seafood marketplace.
