

WiseFish

WiseFish 6.0 and Quality Control

Safety standards are becoming increasingly stringent. While government legislation has long been implemented, your customers now require even more rigorous quality control through third party audits, SQF, or other recognised programs. Easily meet the quality challenge with information-driven workflow which supports your business goals.

The quality monitoring component of WiseFish 6.0 is fully compliant with ISO Standards and HACCP specifications. Define an inspection for each established critical control point, designate each parameter that must be monitored in the inspection, set the range of acceptable values that each defined parameter must meet and automatically display a corrective action when a monitored condition falls out of the acceptable specified range.

Automated Corrective Actions Enforce corrective actions at any stage of material movement from vessel or fish farm right through to customer shipping with built in quality procedures.

Lot Tracking Assign and track by lot at each stage of inventory movement or production, with inspections linked to the lot, vessel, vendor and sales record.

Inventory Expiry Identify and analyse inventory expiry to show items that are expired or nearing expiration.

Bi-Directional Track and Trace Instant bi-directional track and trace from product to component and component to product. WiseFish 6.0 includes the ability to track packaging as well as raw materials used in production, in compliance with the latest regulatory environment.

Document Retention Full quality reporting and document retention to satisfy the most thorough external audit.

Electronic Record Keeping Regulatory Compliance WiseFish 6.0 fully complies with the FDA's CFR Part 11 electronic record keeping rules.

WiseFish

- Audit Trail** Secure, computer-generated, time-stamped audit trail to independently record the date and time of operator entries and actions that create, modify or delete electronic records. This audit trail is required by any FDA audit.
- Speedy Recall Process** Should a recall be necessary, integration to MS Word, MS Excel and MS Outlook for easy notification speeds the process where timing is critical.
- Minimize Risk** Accurate and timely quality information is the only way to guard against the potentially disastrous results of a food safety incident associated with your organisation.
- Traceability** Attain end-to-end traceability and transparency along the whole supply chain.
- Tailored Inspections** All monitored factors and inspections in the WiseFish 6.0 system are setup and defined by you. Fully implement your quality plans to reflect you organisation's needs without the need for expensive customisations.
