

## WiseFish

### Microsoft Dynamics NAV and WiseFish

Microsoft Dynamics NAV offers integrated ERP (Enterprise Resource Planning) business applications and services that allow organisations to streamline their business and increase productivity. These applications also integrate easily with Microsoft core products, such as Office and Windows, to simplify processes across an entire organisation.

Ease of integration and low ongoing support make Microsoft Dynamics NAV particularly attractive to small and medium-sized businesses with limited IT resources.

WiseFish is developed as an industry-specific layer built on the backbone of Microsoft Dynamics NAV software. Close partnership with Microsoft means that development is always in the forefront of innovation for new and emerging software platforms.

## Software for the seafood industry

Key components of the Microsoft Dynamics NAV include:

- Financial management
- Supply chain management
- Manufacturing
- Distribution
- Customer relationship management (CRM)
- Sales and marketing
- Service management
- E-business
- Human resources management
- Project management
- Business analytics
- Customisation

### Introducing WiseFish 6.0 – the next generation in seafood software

With WiseFish 6.0 we have gone back to the drawing board to bring you even tighter integration with advanced Dynamics NAV functionality and the new role based interface.

Focusing on the features that matter to you, seafood specific functionality includes:

- Dual Units of Measure** Purchase, produce and sell all items by both weight and standard box measure definitions, including irregular weight items.
- Integrated Fishing Module** Own vessel catch landed directly into inventory or purchase order from external fleets. Capture special equipment and fishing area details from the trip line. Flexible trip adjustment even after landing.
- Size and Grading Capability** Grade, re-grade and size stock while maintaining origin history.
  - Automated Lots** Maintain complete origin, production and movement history and include product age and expiration information, together with wild/farmed designations without any manual extra steps.
  - BOM Production** One click BOM journal for quick and flexible production registration.
- Value Added Processing** With traceability of all input components.
- Packaging Traceability** Extend the same lot traceability to all packaging components used in production as is available for other raw material items in compliance with the latest quality regulations.
- Pallet Functionality** Pallet directly from production or purchase – optional barcoding and automation possible.
- Integrated Quality Registration/Lot trace** Familiar MS Outlook, Word, and Excel tool capability directly from the trace form for speedy action when time is critical.
- Enhanced SQL reporting tools** For up to the minute business intelligence directly from a secure web browser.
  - Detailed Costing** Supports all standard costing methods including standard cost for products with detailed actual component cost. Keep tabs on costing deviations against targets per production batch.
